

# REPTILES

Turtles, snakes, and lizards  
Don't all look the same,  
But they all have scaly skin  
And share the reptile name.

**Tortoise**

Lizard

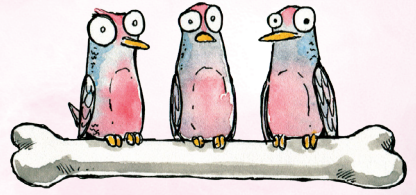

Reptiles have backbones  
That help them move around,  
So they can scurry, swim,  
and crawl,  
Or **slither** on the ground.

Snake

# BIRDS

Birds have bony backs  
And two bony wings.  
They're the only vertebrates  
That both lay eggs and sing.

Tanager

Owl

Piping Plover

Many birds can fly.  
Some can even swim.  
But all of them have  
skeletons  
Underneath their skin.

Mallard
